INTRODUCING WMS

Welding Management System (WMS)

The Complete Digital Ecosystem for Welding Operations, Quality, and Regulatory Compliance.

Secure Efficient Compliant

Market Challenges We Solve

- **Manual Dependency:** Heavy reliance on Excel, WhatsApp, and fragmented emails leading to massive productivity loss.
- **Zero Visibility:** Lack of real-time project health or individual task progress tracking across fabrication yards.
- **Operational Risk:** Human error in data entry leads to inaccurate traceability and failed audits.

The WMS Advantage

Centralized Platform

A single source of truth for all workflows, yards, and personnel. No more data silos.

Real-Time Monitoring

Instant tracking of project milestones, welder utilization, and RFI status logs.

Role-Based Control

Granular permissions for Admins, QC Inspectors, and Site Managers ensuring data integrity.

"From manual chaos to structured automation — WMS is a complete execution ecosystem."

End-to-End Operational Workflow

1. **Admin & Master Setup**
   Add Companies, Yard, WPS/PQR, MM Device & Form Master

2. **Project Planning**
   Module Creation & Specifications

3. **Asset Allocation**
   Assign Materials, Joint Info, Batch Certs & Welders

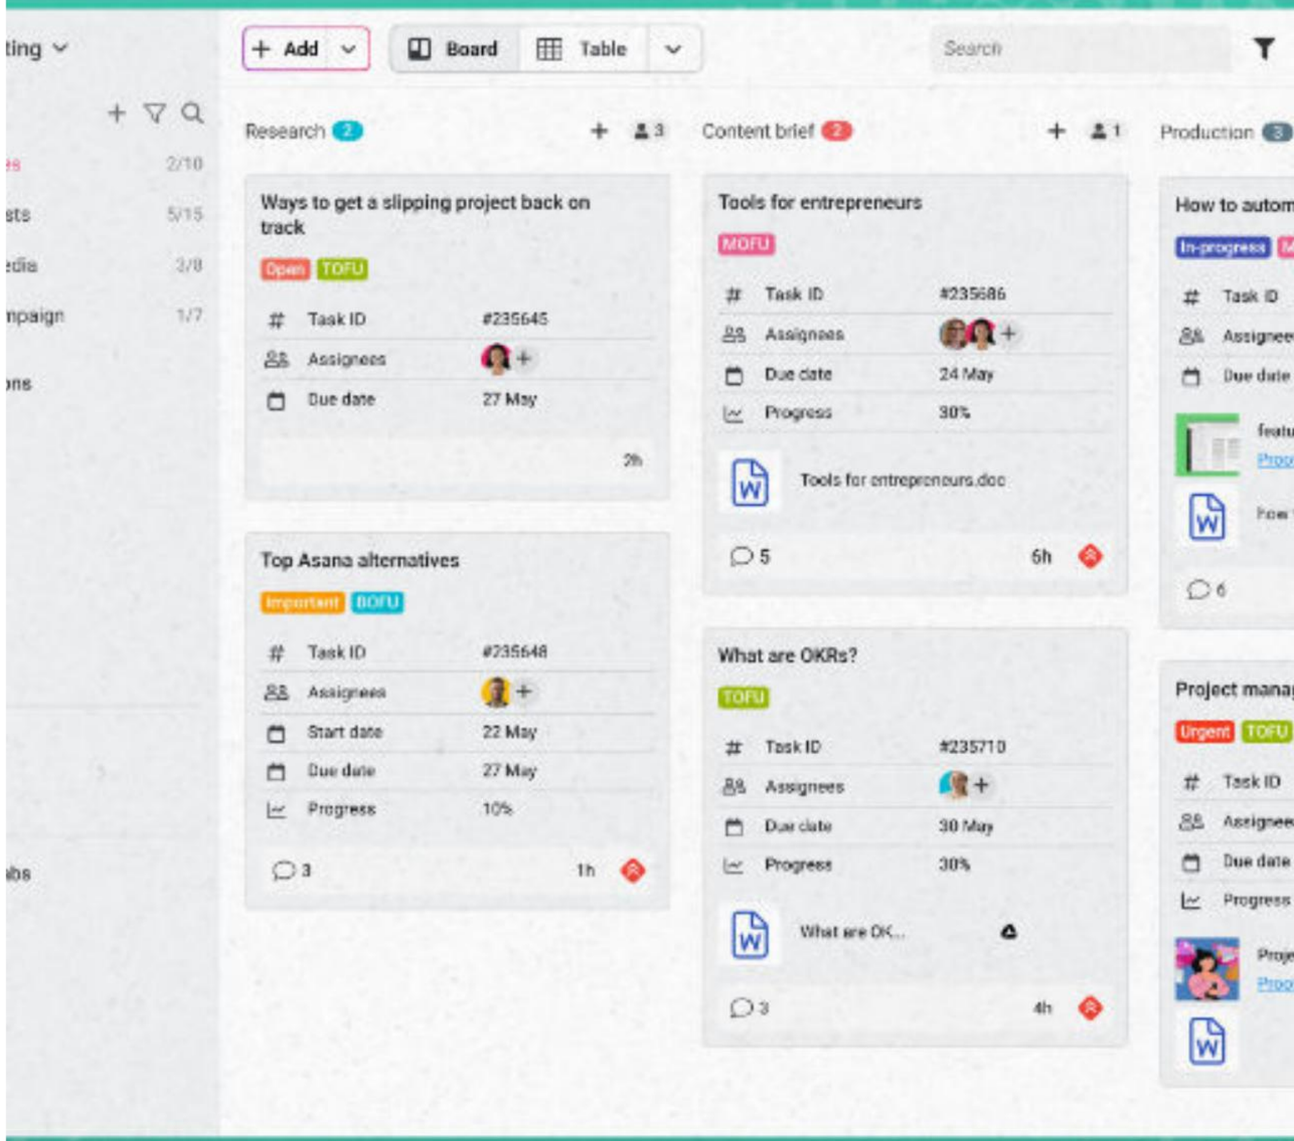
4. **QA/QC Lifecycle**
   RFI (Visual/Field) & Inspections (Fit-up, Visual, NDT)

5. **Intelligence & Intelligence Reporting**
   Weld Traceability Matrix, Performance Analytics, Progress Reports & Sign-offs

Digital Foundation

WMS builds a robust framework starting with Administrative Masters. Our system ensures all technical parameters are pre-defined to eliminate field entry errors.

- **Companies & Yards:** Multi-entity and location management.
- **MM Devices:** Tracking inspection measuring devices.
- **WPS & PQR:** Integrated Welding Procedure Specifications.



Execution: Project & Module Control

Granular Module Execution

Transition from a high-level project to detailed module-wise tracking. Every component is accounted for.

Joint Info
Drawing #, weld type, sheet ID

Materials
Heat #, Standard codes, Dimensions

Batch Certs
Electrode/Consumable certificates

Welders
Unique ID & Qualification tracking

Structured Hierarchy

- Create Project (Client, Yard, Timeline)
- Define Modules (E-House, Skid, etc.)
- Assign Assets (Joints, Welders, Materials)

Quality Assurance: The RFI Engine

Request for Inspection (RFI)

A digital gateway ensuring that nothing is missed. The system enforces compliance before work proceeds.

- **Visual RFI:** Digital requests for onsite visual verification.
- **Lock Logic:** System automatically locks joints once an RFI is active to prevent tampering.
- **Live Tracking:** Real-time logging of inspection dates, times, and results.

Result: 100% Audit Readiness for regulatory sign-off.

Verification Gates: Field Execution

Fit-up Report

Alignment, gap, and tack quality verification before welding.

Visual Report

Surface inspection for defects, porosity, and undercut post-welding.

NDT Reports

Non-Destructive Testing (RT, UT, MT, PT) to confirm sub-surface integrity.

"Each inspection stage is verified against project specifications via automated logic."

Data Analytics Dashboard

Data-Driven Excellence

Turn raw field data into professional, ready-to-export reports with a single click.

Weld Traceability Matrix (WTM): The holy grail of audit records. History of every joint.

Welder Performance: Tracking repair rates vs. length tested.

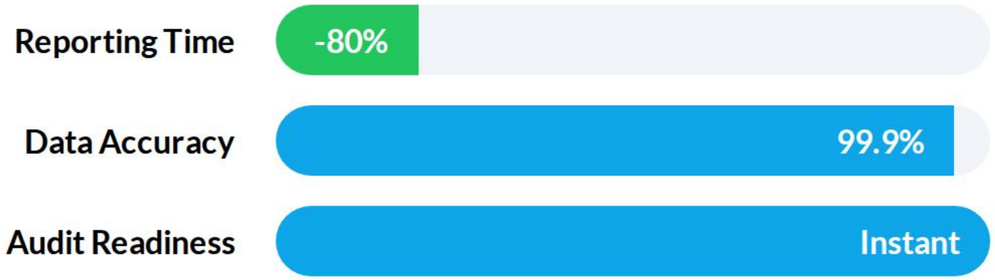
Progress Reports: Macro and micro views of project health.

Operational Impact

60%

Reduction in Manual Effort

Automated dispatch and live status dashboards replace hours of calls and SMS follow-ups.



Questions?

Work Smarter. Not Harder.
